Puf, impressive :woohoo: , do I suppose that to the engine him(her) changed pistons, shirts, connecting-rods cigueñal and everything, not? For that with this power and this couple, of series it(he,she) does not last, and is it sure that it has taken a lot of money to itself not? We wait for the link eagerly(impatiently). Certainly I sey this power, 265 more or less for the graph.:P A greeting
